## SUPER PREMIUM SYNTHETIC LUBRICANTS

**THORLUBE** advanced technology fluids have been serving industry for over 12 years. During that time synthetics have become the lubricants of choice for compressors and rotating machinery.

There are many different types including Synthetic Hydrocarbons, Diester, & Polyol Esters and others which have outstanding resistance to oxidation and thermal degradation and which provide extra protection for machinery from wear and corrosion and deposit formation.

**THORLUBE** Super Premium quality base fluids, combined with our exclusive additive system, give the most exceptional performance in the most demanding conditions and are unmatched in industry today.

Our constant goal is to produce the best fluids money can buy in order to protect your investment in expensive equipment.

## QUESTIONS AND ANSWERS

**Q. I've heard that synthetic lubricants can be pretty nasty. What about THORLUBE?**

A. All THORLUBE products are NON-Toxic / NON-Hazardous and do not contain any known carcinogens.

**Q. What is the tolerance ratio and flushing interval when changing from another synthetic to THORLUBE?**

A. When using the correct cross over lubricant match, flushing is not required at all. THORLUBE can be added to the existing synthetic in any quantity or ratio from topping up to complete change. In fact, by adding THORLUBE, the performance of the existing synthetic is enhanced.

**Q. What about colour?**

A. The colour in any synthetic is merely a dye and has no bearing on its performance or stability. We prefer to keep THORLUBE clear to emphasize it's purity and strength.

**Q. What guarantee do I have that this stuff is as good as you say it is?**

A. Simple! If THORLUBE does not perform as well as, or better, than your existing synthetic, match for match, we will give you your money back and the freight. Guaranteed!!
